

**BITES...**

(Continued from Page 1)  
 pups is asked to contact the original dog which infected the mother with rabies.  
 Anyone owning one of these pups is asked to contact the

local branch of the L. A. County Health Department immediately so the dog may be placed under observation. The number is FA. 8-3310.  
 Another dog, a 3-months-old blond cocker pup, died of dumb rabies. The dog was picked up at New Hampshire and W. 204th st. Thirteen human contacts were reported. Suspected contacts should be reported to the Health Department.

**DOUGLAS...**

(Continued from Page 1)  
 would be the fuselage. They are capped with a dorsal panel over the engine area. In the final steps, the vertical stabilizer and inner wing slats are attached.

**Speed and Economy**  
 Speed and economy of operations are possible on the final installations and operations line by the nature of the arrangements. Continuous work is practical from above and below the stationary platform.

All hydraulic, electrical, and mechanical installations are connected while the airplane rests on its cradle on the tracks. Elevons and landing gear also are attached. Navy and company inspections are completed during the aircraft's travel along the line.

Each airplane is transported by truck to the hangar location at International Airport for installation of a J-5 engine, radar, and armament.

After exhaustive flight testing by Douglas and Navy pilots, the F4D is ready for delivery to follow a long line of Douglas airplanes which have served the United States Navy.

**Weekend Guest**

Among the 3,100 students enrolled at California State Polytechnic College, is William Bent Jay of 1535 West 203rd st. He is a student of mechanical engineering at the school.
